

Assignment 9

SehaKotkuKAYA

2025-12-16

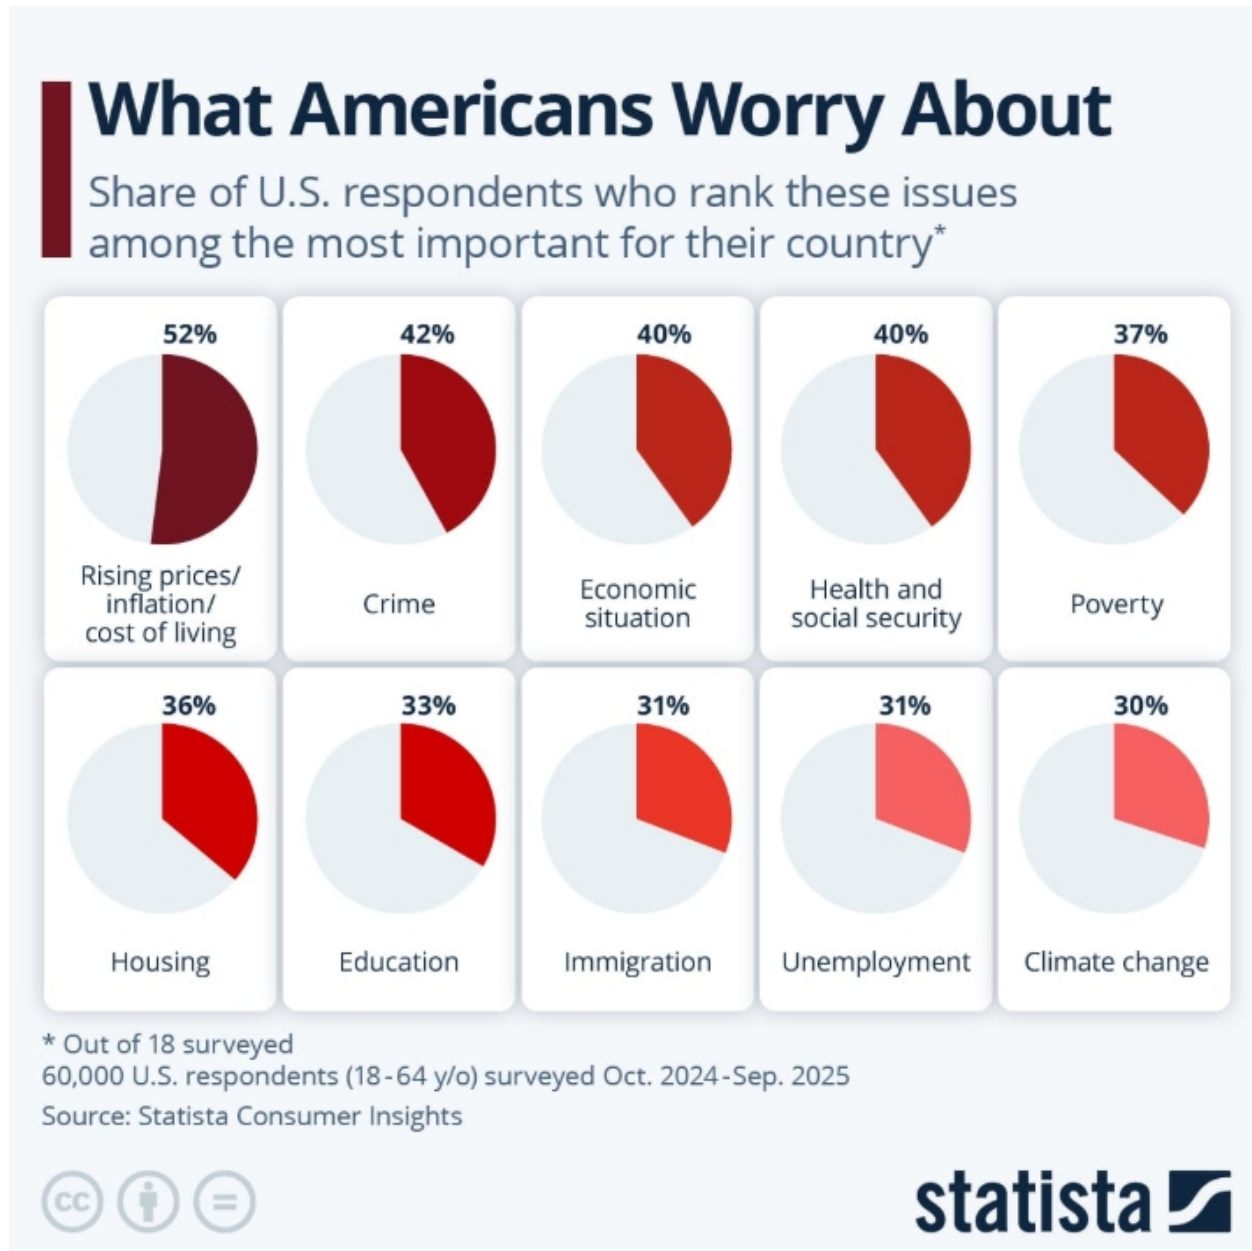

Figure 1: Bad Graph

What is problem? The anxieties that America has are intertwined, and this has been interpreted using a pie chart. Using pie charts is generally a poor choice, as it can lead to both readability issues and misinterpretation of the results.

Errors

1) Data sums are not 100%.

2) Comparing them is difficult. It's very hard to understand the differences when comparing the two pie charts. It's only possible to understand them by looking at the numbers.

How to solve problem? I would prefer a bar plot instead of a pie chart for this. I would set the bars from smallest to largest, with the longest bar at the top. I would set the scale to 100% and set the bars so that the longest bar has a different color than the others. This would minimize data loss and make comparisons between data points easier. I would put the concerns on the left side and the percentages at the top.
