The graph used in the CNBC-e news report shows a significant discrepancy between the bars and the percentages. Although 34% of people are concerned about the Zika virus, it appears to be less than the percentage of those who are not concerned; in fact, it seems as if there are no concerned people at all. To correct this, the percentages and the bars need to be proportional.

Fisherfinger prices are given monthly between January and August 2022, but it can be seen that the price was €6.50 in January, February, March, and April, and then increased by approximately €1 in June, July, and August. However, looking at the bars in the graph, it gives the impression that the price has doubled, whereas in reality there is only an increase of approximately €1. This misleading perception can be eliminated by using the bars for the prices proportionally to each other.

Mushroom is the UK's most liked pizza topping

Generally speaking, which of the following toppings do you like on a pizza? Select as many as you like

Other items not depicted include: onions (62%), chicken (56%), beef (36%), chillies (31%), jalapeños (30%), pork (25%), tuna (22%), anchovies (18%). 2% of people say they only like Margherita pizzas

February 26-28, 2017

A survey was conducted in the United Kingdom to determine the most popular pizza ingredients, using a pie chart. A significant error was made in calculating the percentages for the most popular ingredients, resulting in percentages exceeding one hundred when added together in the pie chart. To correct this error, the percentages should be calculated based on the proportions of the survey participants, in accordance with the pie chart.
